Slide notes: Period positioning is therefore mostly automatic, and for Users who can only post in the Current Active Period, it is fully automatic. For Users with privileges that allow posting in a selection of multiple open Periods, positioning is automatically linked to the current Period for the current User, but the User can also select prior or future Period positioning, if such Periods are open and available for posting.

Slide notes: It is worth noting that the Financial Period of a Journal determines which Period Balances will be directly affected by the Journal, but that the Transaction Date is NOT bound by the Period.

Slide notes: There are also some advanced features available with default Period positioning, and we can learn more about those in the tutorials on Period Management, in Accounting Controls.
